

I just heard yesterday that there is a movement to try to eliminate the traffic and weather broadcasts from my XM radio. Please don't do this. My local broadcasters may feel that they are being cheated out of my listening to them, but before I started receiving "continuous traffic and weather", I would check it out on the internet or tv before I left the house. I would think that I am a safer driver for tuning into 1 station instead of punching 5 buttons because not one local station is broadcasting traffic info when I need it (the locals stop @ 0830 or 0900 and do an evening rush but nothing much past 1800) not just when it's convenient for them.

On local stations I am also forced to listen to whiny djs and obnoxious national hosts to get my traffic, with XM I am not.

PLEASE DO NOT TAKE THIS SERVICE AWAY!!!

It was invaluable recently when I was in Chicago (where I don't regularly drive) I got Chicago information without punching numerous buttons instead of paying attention to the road.

I pay for this radio service & should be able to have access to these channels as I wish. The cable weather channel broadcasts my local forecast, why can't my satellite radio give me traffic information?

I would be happy to repeat this verbally if necessary.

Thanks,

Lee Ann Wasson
